ZOT "GlossBoss" Coin-Op Ball Conditioner

#420397

ZOT is pleased to introduce the all-new feature rich "GlossBoss" Ball Conditioner ... a Coin-Operated machine that can generate revenues for your center or pro-shop ... even when you're not there.

If you're interested in adding \$7,686* revenue or \$7,120* profit to your bottom line ... it can happen with a ZOT "GlossBoss" Coin Operated Ball Conditioner.

*Figures based on centers with a 1000 registered winter league season bowlers. Call ZOT at 1-800-525-8116 and ask for a copy of revenue reports.

Scrolling Color Message & Advertising Display

Customer Friendly Display

Bill Acceptor

Mechanical Compound Advance System

Electronic Coin Validator

Easy to Program Control Box

Unique Easy-Adjust Buffer Shaft

Buffer Pressure Meter

GlossBoss Buffing Compound

420416 (two blocks per box)

- Same formula that major bowling ball manufacturers use to factory finish new bowling balls
- Designed and formulated to give a superior polish to all bowling ball compositions including: Urethane, Reactive, Particle, Plastic and Rubber.
- Date stamped for shelf-life verification

Buffing Wheel

#820017

- Longest lasting buffing wheel in the industry.
- Superior compound transfer to buffing wheel and ball.
- Non-corrosive black powder coated steel hub.

Note:

Always check the condition of the spacers when replacing the buffer wheel.

Lustre Kleen Spacer Kit #420374

Yes...you can make money with a Ball Conditioner

If you're not making money with your ball conditioner ...it's because:

You don't have one

The one you have is out of order

The one you have doesn't polish balls

You're charging a 1950's/1960's price

You don't have a ZOT "GlossBoss" Ball Conditioner

Promoting your Ball Conditioner Pay Attention and Keep the Ball Conditioner in Adjustment: This is really easy to do, yet it's the number one reason ball conditioners do not yield their potential in terms of revenues and profits. If a ball conditioner does not polish balls, bowlers won't use it. It's as simple as that.

Promotion, Promotion, Promotion: Typically a ball conditioner is used by about 6 percent of bowlers a week, providing of course, the unit functions properly. With just a little promotion, this percentage can be substantially increased.

Features and Benefits

Customer Friendly Display: The customer display screen shows price, money's deposited, cycle-time and cycle-time remaining, plus house-ball and Sold-out modes.

Four Easy-to-Program Price Levels: A simple two-button operation. Hold down one button and pulse the other until the illuminated LCD's on the Display panel show the desired Price levels This feature enables you to periodically increase the price as and when desired.

Four Easy-to-Program Run Times: A simple two-button operation. Enables you to adjust the run times to maximize revenues and the number of users.

Electronic Coin Validator: Programmable for promotional tokens and single coins of any denomination (e.g. Quarters or Dollar Coins in the US) and most currencies, subject to size (maximum 34mm diameter and 3.4mm thick).

Bill Acceptor: ZOT's internally mounted Bill Acceptor will typically increase machine usage anywhere from 15 – 30 percent. A ZOT Bill Acceptor also reduces the frequency in making change for customers, and makes cashing out the machine easier.

Mechanical Compound Advance System: A time tested proven system makes it easy to maintain a high quality polish without the constant need for adjustment and readjustment.

Easy-Adjust Buffer Shaft: Enables you to easily set the buffing wheel adjustment correctly and guarantee the Ball Conditioner "Really Polishes Bowling Balls", ball after ball after ball. Simply loosen six bolts and rotate a calibrated jackscrew each time the compound block is replaced.

Double-ended Bearing Support on Buffing Wheel: Makes wheel replacement easy and yields a smooth running operation without the tricky balancing exercise required with older machines.

Scrolling Message and Advertising Display: This easy to program multi-color digital display enables centers to develop their own promotional and advertising messages to their customers.

Buffer Pressure Meter: Takes the guesswork out of measuring the pressure between the buffing wheel and surface of bowling ball for optimal ball polishing performance.

Introducing the ZOT GlossBoss II

#420398

If you have a small center, or a center with a minimal number of league bowlers (e.g. 350 or fewer) or are simply just not ready to invest in a machine that includes all the bells and whistles, ZOT's new GlossBoss II may be just the answer.

The GlossBoss II is identical to the GlossBoss except the Scrolling Message Display has been replaced with a Static Sign, and it does not include an Electronic Coin Validator, relying instead on just the Bill Acceptor. The GlossBoss II retains the same high polishing performance as the original machine – and all for a price tag that is more than 20-percent less than a GlossBoss.

Customer Friendly Display: with LCD display for Price, Coin Intake, Cycle Time Paid, & Cycle Time Remaining

Bill Acceptor: that typically increases machine usage by 15-30%

Mechanical Compound Advance System: The industries most popular and dependable Compound Advance System

Easy to Program Control Box: enables programming and management of Four Price and Run Time (Gloss) Levels.

Buffer Pressure Meter: along with ZOT's Unique Easy-Adjust Buffer Shaft makes setting buffer pressure easy and guarantees a great polish for your bowlers ... every time.

"It only takes 'ONE' ball polish a day to pay for a GlossBoss II machine."

ZOT Ball Conditioner Restoration and Conversion Kits

If you're not quite ready for a GlossBoss or GlossBoss II but have an old ball conditioner that's not functioning, ZOT manufactures restoration and conversion kits that are compatible to most brands' ball-conditioners.
